

AREA:

TREAD

CONDITION:

Some parts of tread wearing less than the other parts forming islands or coastlines.

CAUSES:

- Faulty suspension, faulty rotating parts and/or brake parts such as axle beams, bearings and brake shoes.
- Incorrect vehicle geometry settings.
- Repeated sharp turns in cornering and frequent, rapid changing of lanes at high speed.
- Incorrect tyre pressure.
- Dynamic imbalance of tyre and rim assembly.
- Incorrect matching of tyre and rim assemblies.

HOW TO CHECK:

Inspect the whole circumference of shoulder part in tread visually.

RECOMMENDATIONS:

- Repair the mechanical parts such as faulty suspensions, axle beams, bearings and brake shoes.
- Correct vehicle geometry settings.
- Avoid rough driving.
- Balance tyre and rim assembly.
