

AREA:

TREAD

CONDITION:

The centre of tread wearing faster than the shoulders.

CAUSES:

- Over inflation.
- Improper matching of tyres and rims.
- Tyres are not rotated at a timely interval.

RECOMMENDATIONS:

- Do not overload tyres. Maintain recommended inflation pressure for the axle loads imposed.
- Use the correct size rims, that are clean and free from damage and corrosion.
- Rotation of tyres at a timely interval.

HOW TO CHECK:

Inspect the tread visually and measure the remaining depth of each main groove with a depth gauge.
